

Business internet

7 configurations

- Speeds up to 10 Gb/s
- Redundant connections available
- Up to 32 dedicated IPv4 addresses, plus an IPv6 address block
- Support for dedicated IPv4 addresses (PI space)
- Symmetrical bandwidth
- Support for failover protocols
- Network monitoring center available 24/7

Do you want to ensure reliability in your online business transactions? Always online with high-speed internet access? Eurofiber's business internet provides your employees with fast and reliable internet access via our fiber-optic infrastructure. Now they can efficiently browse, e-mail and use cloud applications – like CRM, office suites or financial software – without long load times, buffering or slow downloads. Our internet solution is also ideal for giving your customers and partners access to your software, platforms or infrastructure.

Ranging from standard access to complex redundancy

Eurofiber Internet comes in 7 different variants: from simple access all the way up to a complex, redundant transit solution. Eurofiber's range of internet solutions responds to current market demand for scalability, redundancy, and freedom of choice:

- scalable, so you can easily add more bandwidth
- redundant, in terms of infrastructure and fiber-optic connections, as well as various redundancy protocols
- freedom of choice, so you can use your own IP addresses or Eurofiber IP addresses.

Speeds up to 10 Gb/s

The bandwidth of your internet service is equal to the bandwidth of our Ethernet connection. And that's always symmetrical: the upload speed is equal to the download speed, ranging from 50 Mb/s to 10 Gb/s. Our high-speed business internet allows you to send files quickly and use online applications on multiple devices at the same time. Services like videoconferencing and camera surveillance run much faster and better on internet access via a fiber-optic connection.

Eurofiber internet ranges from a standard connection all the way to a complex, redundant variant for business-critical processes. We offer internet access in various standard configurations, high-speed bandwidths and redundancy options. We also provide support for VrrP and BGP failover protocols.

Internet and our fiber-optic connections

Eurofiber always delivers internet services over our own fiber-optic network to ensure that your organization has optimized internet access. If you would like to know more about Eurofiber's other services, check out our product leaflets on Ethernet VPN, Managed Dark Fiber and WDM.

"50% of all internet traffic from companies in the Netherlands travels over Eurofiber's stable fiber-optic network."

Service

Eurofiber's business internet offers optimum availability. Uptime of the fiber-optic infrastructure is at least 99.9%. You can also rely 24x7 on expert support from our Customer Operations Support department

Overview of the 7 configurations

	Config #1	Config #2	Config #3	Config #4
Commercial name	IP Access Basic	IP Access Basic PI	IP Access Redundant VRRP	IP Access Redundant BGP
Bandwidth Mb/s	50 - 5,000	50 - 5,000	50 - 5,000	50 - 5,000
Address Space	PA	PI	PA & PI	PA & PI
Connection	1x CPE	1x CPE	2x CPE	2x CPE
IPv6 space options	/64 of /48 PA	PI	Roadmap	/64 of /48 PA of PI
Redundancy protocol	nvt	nvt	VRRP op CPE	BGP
